

CARRYMATE® Non-Slip Panel Grips

Protects your hands, prevents back strain and improves productivity!

The unloading and transport of sheet materials to their installation sites is not only time-consuming but also very strenuous. Smooth surfaces make it difficult to securely carry the material, especially through narrow passages or across uneven grounds. Carrymate® Safety Grips are used in pairs and each grip is capable of holding up to 220 lbs, which makes them suitable for moving a wide variety of materials.

- The point of contact to the material can be wherever it is most suitable for each user's height
- Both users can walk forward and face the direction they are going in
- The user's lifting arm and back remain straight
- The user's other hand is now free to support the material or to move obstacles to the side (open doors, etc.)

The clamping system self-adjusts to the width of the material and securely holds it in place without damaging its surface. All parts of the Carrymate® Transport Grips that touch the load are covered with a special coating so that even the most polished materials will not be scratched. The ergonomically designed carrying grip provides a secure hold and even during turns and pivots the user can easily hold on to the load.

Suitable for:

- Glass/IGUs (double/triple)
- Sheet metal
- Plywood/Dry Wall
- PVC
- Solar modules
- Natural stone, etc.

- Sturdy aluminium construction
- Self-adjusting non-slip Clamps
- Holds up to 220 lbs. per grip - sold in pairs
- Cushioned shaft prevents damage to the carried load

59-177
